

Ablations 2019/20: Procedure Volumes by Operator

The table indicates ablation procedures (simple, complex, and total) for each operator, along with procedures (mostly electrophysiologic studies) where no ablation was performed. A procedure is assigned to each doctor entered as 1st or 2nd scrubbed operator, or as the responsible consultant. Thus, each procedure can contribute to the totals for more than one doctor. Doctors have been identified solely using GMC No and names/registered specialties have been derived from the GMC List of Registered Medical Practitioners (LRMP). The occasional appearance of unexpected specialties (such as obstetrics and gynaecology) is probably due to the entry of a valid but incorrect GMC No. Blanks may indicate fellows not in formal training posts, etc.

For cardiologists, each operator's activity has been rated according to the current national recommended minima (50 total procedures for those undertaking simple ablations only, and 25 complex procedures for those undertaking these). Figures are colour-coded red for <90%, amber for 90-110%, green for ≥110% of these recommendations. Darker green indicates meeting the "ideal" of ≥50 complex blations. For the three-year totals, the thresholds have been multiplied by three.

This guidance is for adult cardiology only, so paediatricians have been excluded from "red/amber/green" rating, as have cardiothoracic surgeons and trainees. Procedures by paediatricians are also submitted to the national congenital heart disease audit, so figures here may be incomplete. In accordance with ONS guidance, exact data have been suppressed where case numbers are less than 3, to ensure anonymity of the patient data included in the reporting.
